

Anton's Shelving Systems

Anton's patented design, general purpose, self contained clip together shelving is ideal for freezer and coolroom applications, kitchen equipment storage requirements or general commercial storeroom applications.

- Note the extra sturdy construction utilising 38x38x3mm angle iron in both the end frames and shelf support rails to safely accommodate heavy loads.
- Reinforced open wire shelves allowing free distribution of air which is especially important in freezer/coolrooms and for vegetable storage. The wire shelves can be easily removed for cleaning.
- The number of shelves in each frame can be varied to suit individual applications. Shelf height adjustment is provided at 50mm intervals.
- Patented joining system locks shelves securely in position restricting side movement and eliminating the need for diagonal bracing.
- The unique shelf locking system means fast simple assembly. No tools are required. Just position the shelf support at the required height and tap the locking tab into the slotted upright.
- Standard adjustable levelling feet can be replaced by castor wheels for mobile applications (diagonal bracing of frame required).
- Attractive easy to clean finishes of bright electroplated zinc or all polished stainless steel.
- Accessories include Meat Rails for hanging meat on hooks and removable vegetable baskets for convenient and efficient storage of bulk vegetables.
- Extra heavy duty shelving is also available manufactured to your own specifications and load carrying requirements suitable for supermarkets and warehouse storage.

Standard Shelving Sizes

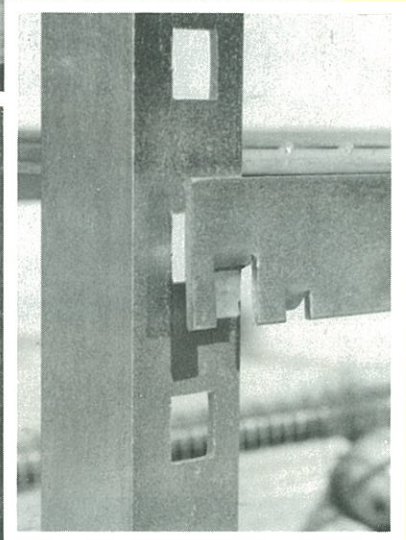

End Frames

Widths - mm
300, 375, 450, 525 & 600

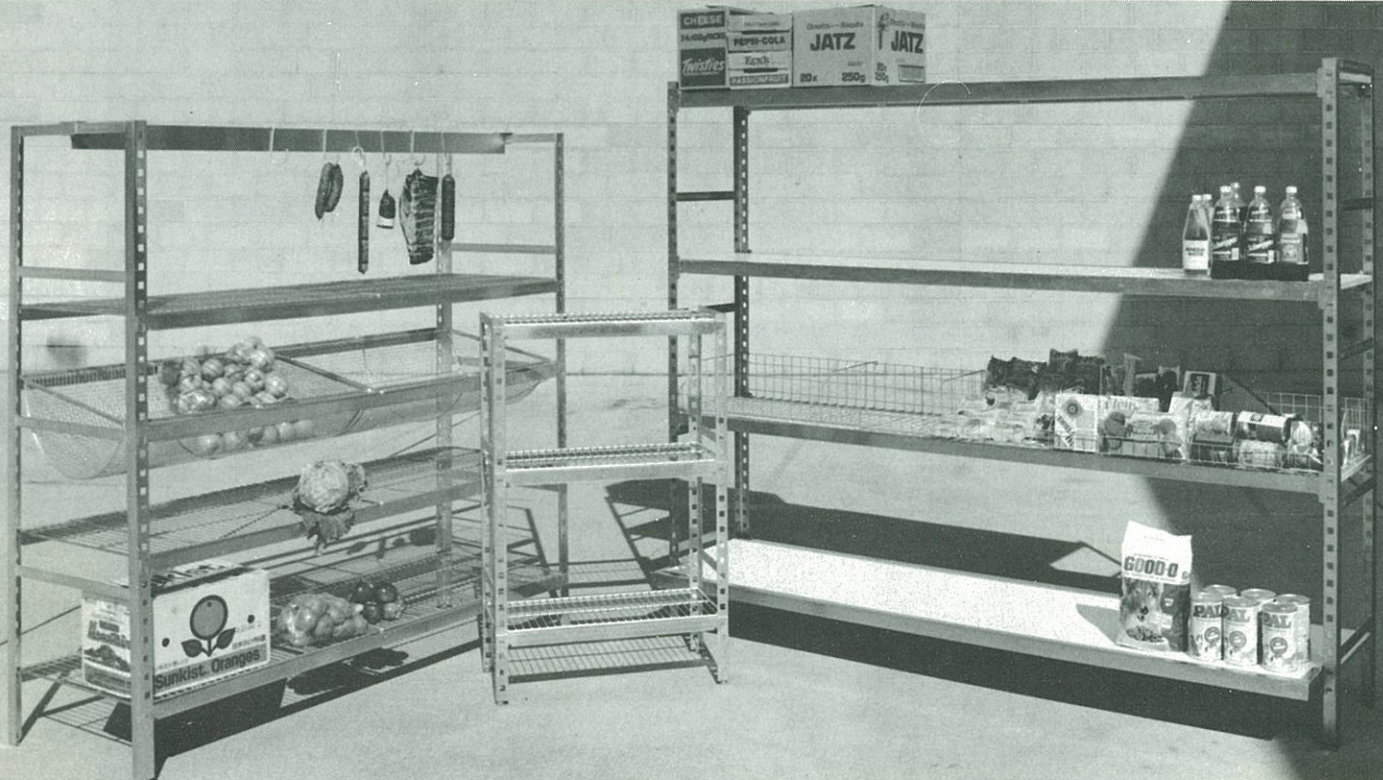

Heights - mm
1350, 1500, 1650 & 1800

Shelving

Lengths - mm
600, 750, 900, 1050, 1200, 1350, 1500, 1650 & 1800
